Manual Transfer Switches / Generator Panels

Product Description

A Transfer Switch Panel is a device that is mounted next to or incorporated within the loadcentre (distribution panel) in the home or small business. The Transfer Switch Panel is used in conjunction with an emergency generator (usually supplied by others) and serves the purpose of turning selected circuits on and off during a power outage. The Transfer Switch Panel allows the owner to start up a generator and then restore power to critical circuits when utility power is not available.

The owner designates which circuits are critical such as their refrigerator, furnace, and certain lighting loads. Sometimes called Emergency Power Panels, Emergency Generator Panels, Gen. Panels, Transfer Switches or Emergency Panels; Transfer Switch Panels provide the homeowner or small business owner with a safe and easy way to continue using essential electrical loads when utility power is not available.

Product Application

Transfer Switch Panels are most often used in residential, agricultural and light commercial applications. Comfort and safety are key concerns of many homeowners who are dependent on an uninterrupted supply of electricity.

The increase in our dependence on power is due in part to the popularity of home business and in-home care. In addition, various rural and urban regions in

North America experience periodic power outages due to extreme weather conditions such as ice and snowstorms, heat waves, tornadoes or hurricanes. Regions such as Pacific, Atlantic, and Central are the strongest markets for portable generators and Transfer Switch Panels. Features, Functions, and Benefits
Eaton offers two unique manual transfer switch emergency power solutions.

- Manual Transfer Switches or a Generator sub-panel.
- Combination Service Entrance Loadcentre with Generator Sub-panel.

CPL112G3

CPM126GEN

Manual Transfer Switches / Generator Panels

- Main utility and emergency (generator) breaker factory installed.
- Available in 30 and 60 ampere design.
- Utility breaker and generator breakers are mechanically interlocked to protect equipment and personnel by preventing dangerous dual-source feeding.
- Critical loads permanently connected to allow for quick and convenient switching from utility power to stand-by generator power.
- Designed for switched neutral applications. Can be reconfigured in field for non-switched neutral applications.
- Sturdy and reliable 125A rated aluminum bus design.
- Type BR/DNPL branch breakers sold separately.
- Ideal for new and retrofit installations.
- EEMAC 1 indoor enclosure design.

Standards and

Certifications

- CSA approved.

Product Specifications

- 10,000 AIC Rating.
- Switching devices must be circuit breakers.
- Transfer switch panel must be supplied with neutral and ground.

Combination Service Entrance Loadcentre Generator Panels

- Single enclosure (EEMAC 1) to house both loadcentre and generator breakers
- Factory installed main breakers.
- Available in 100 and 200 ampere designs.
- Utility and emergency transfer switch breaker factory installed.
- Utility breaker and generator breakers are mechanically interlocked to protect equipment and personnel by preventing dangerous dual-source feeding.
- Critical loads permanently connected to allow for quick and convenient switching from utility power to stand-by generator power.
- Designed for switched neutral applications. Can be reconfigured in field for non-switched neutral applications.
- Type BR/DNPL branch breakers sold separately.
- Ideal for new and retrofit installations.
- EEMAC 1 indoor enclosure design.

Standards and

Certifications

- CSA approved.

Product Specifications

- 10,000 AIC rating for CPM126GEN
- 25,000 AIC rating for CPM236GEN
- Switching devices must be circuit breakers.
- Transfer switch panel must be supplied with neutral and ground

Home Standby Generators

Product Description

Home standby generators are designed to provide substitute electrical power to a residence in the event of a utility power outage or other emergency.

The standby generators are available with natural gas or liquified propane powered OHVI engines. All models are field convertible from one fuel type to the other.

Standby generators are most often used in residential, agricultural and light commercial applications. Comfort and safety are key concerns of many homeowners who are dependent on an uninterrupted supply of electricity.

The Eaton brand generators are available in 8,000W; 11,000W; 16,000W; 20,000W; and 22,000W models.

Sump Pump	800-1050
Table Saw (10")	1750-200
Television	200-500
Toaster	1000-1650

Notes:

- The rated wattage of lights can be taken from light bulbs. The rated wattage of tools, appliances and motors can usually be found on a data plate or decal affixed to the device.
- If the appliance, tool or motor does not give wattage, multiply 120 volts times the ampere rating to determine watts (volts x amps = watts).
- Some electric motors (induction types) require about three times more watts of power for starting than for running. This surge lasts for only a few seconds. Be sure you allow for this high starting wattage when selecting electrical devices that will be energized by the backup power system:
 - Figure the watts required to start the largest motor.
 - Add that to the total running watts of all other connected loads.

Home Standby Generators

Features, Benefits and Functions

Eaton generator systems offer a wide range of features. All systems feature:

- User friendly digital controller.
- Electronic governor for consistent run speed.
- Composite mounting pad.
- Field conversion to natural gas or LP fuel.

- Superior electrical harmonics for flawless operation of sensitive electronics.
- Aluminum housing option on the 20kW model. (Standard on the 22kW).
- Durable electrostatically applied texturized paint.

External GFCI receptacle and Quiet test on 16,20 and 22kW.(generator powered)

Accessories

- Engine Oil (included)
- Battery Warmer (purchased separately)
- Trim out fascia purchased separately (standard on 20 and 22kW Aluminum)

If Programmeable exerciser, can be set to: Weekly/ Bi-Weekly/Monthly

Standards and Certifications

- All transfer switches are CSA and UL listed as Transfer Switches.
- All generators are CSA and UL 2200 listed.

Warranty	5 Years Limited	5 Years Limited	5 Years Limited	5 Years Limited	5 Years Limited	5 Years Limited

Maximum wattage and current are subject to and limited by such factors as fuel BTU content, ambient temperature, altitude, engine power and condition, etc. Maximum power decreases about 3.5% for each 1,000 feet above sea level; and also will decrease about 1% for each 6°C (10°F) above 16°C (60°F) ambient temperature.

^b Load current values shown for 120V are maximum TOTAL values for two separate circuits. The maximum current in each circuit must not exceed the value stated for the 240V.

Home Standby Generator Accessories

Enclosed Service Entrance Rated Circuit Breakers

ECSEGEN20R

Product Description

In applications where a whole house transfer is being performed a separate service entrance rated disconnect means is required. Figures 2 and 3 on page 7 of this guide show a typical whole house transfer configuration. The difference between these two configurations is the mounting location of the service entrance disconnect and residential automatic transfer switch. Eaton offers both an indoor NEMA® 1 and outdoor NEMA 3R rated enclosed circuit breaker in either a 100 ampere or 200 ampere rating.

Air Cooled Generator Accessories

Product Description

Eaton offers a number of accessories for its line of air cooled standby generators. Some of those include cold weather kits with battery and crank case heaters, preventative maintenance kits for engine servicing, and wireless remote keypads for monitoring generator status.

Residential Automatic Transfer Switches

50, 100, and 200 Ampere Automatic Transfer Switches

Product Description

All of the below switches are “utility sense” type of switches and automatically transfer to the appropriate source of power when signalled from the generator. 100 and 200 ampere (A) switches are capable of ‘whole house’ power transfer in residential/small business applications. 100 and 200A switches can also be used in conjunction with a sub-panel where switching of critical loads is desired.

The 50 and 100A combination critical load panel and transfer switch models provide a clean and convenient single enclosure solution for critical load applications. The 12 or 24 circuit loadcentre incorporated into these models utilize the 3/4” width Type CH circuit breakers.

^a Can be used for Indoor applications.

^b When protected by one of the following circuit breakers rated not more than 150 amperes. (Eaton/Cutler-Hammer BR, CH, FDC, CSR, CSH, BW, BWH; Siemens CED6, ED6, ED4, HED6, HED4.) Else rated 10,000 A rms at 240VAC maximum.

^c When protected by one of the following circuit breakers rated not more than 400 amperes. (Eaton/Cutler-Hammer DK, KD, KDB, HKD, JDC, KDC, LCL, LA, JDB, JD, HJD, CSR, BW, BWH, FD, FDC; Siemens FD6-A, FXD6-A, HFD6, CFD6; Square D KI, LE, LX, LXI; General Electric SF, SFL, SFP.) Else rated 10,000 A rms at 240VAC maximum.

^d Utilize the 3/4” width Type CH Circuit breakers found in the Residential Distribution Products Guide.

Residential Automatic Transfer Switches

100, and 200 Ampere Service Entrance Automatic Transfer Switches

Product Description

Our Service Entrance (SE) Rated switches combine the SE Disconnect and ATS in one convenient enclosure. They are available in two styles; Basic (EGSC line) and Advanced (EGSCA line). The basic line relies on the generator to monitor utility and generator voltages and will automatically transfer to the appropriate source of power when signalled from the generator. The Advanced line of switches are compatible with utility sense and engine start type generators, and do not require a transfer signal from the generator. They also feature LED position indicators and source availability indicators.

The Advanced units have the load management capabilities of the RTC-100 control board. (separate Current Transformer's (CT's) needs to be purchased for this functionality, quantity 1 PN CS200) Two sets of contacts are available to control large connected loads based on available generator capacity.

Standards and Certifications

- CSA approved.

Specialty Metering Products

Metered Manual Transfer Switches

Product Description

A metered manual transfer switch is service entrance equipment that consists of a single meter socket and a manual transfer switch. The manual transfer switch is comprised of a service entrance rated utility breaker and an emergency generator breaker that are mechanically interlocked to prevent dangerous dual source feeding.

Metered manual transfer switches are increasing in popularity as the socket and manual transfer switch are located in one easy to install location, thus providing the contractor with a labour and material savings when being installed.

Application Description

Metered manual transfer switches are typically installed in rural residential and agricultural service entrance applications where utility power outages are more frequent.

Features, Functions, and Benefits

- Includes 200A rated meter socket.
- Main utility and emergency (generator) breaker factory installed.
- Available in 100 and 200A design.
- Utility breaker and generator breakers are mechanically interlocked to protect equipment and personnel by preventing dangerous dual-source feeding.
- Switched neutral design.

- 50, 100, and 200A Generator circuit breaker models.
 - Type 3R outdoor design.
- Standards and Certifications**
- CSA approved.

Product Specifications

- 25,000 AIC rating switched neutral models.
- Switching devices must be circuit breakers.

Specialty Metering Products

Metered Service Entrance Rated Automatic Transfer Switch

Engine Start Type

Product Description

Combined in a single enclosure and factory wired is a 200A meter socket, service entrance rated circuit breaker disconnect, and an automatic transfer switch (ATS). The single enclosure assembly saves the installing contractor time and money while leaving the home owner with a cleaner and more attractive installation on the outside of their home.

Designed to work with standby generators that use a two wire start signal configuration. (Not for use with utility sense unless EGSUSKIT is purchased separately)

Application Description

- New or retrofit residential standby generator installations
- Farm or rural properties

Features, Functions, and Benefits

- Combined functionality in a single enclosure.
- Saves installation time and cost
- Service entrance approved for Canada
- 100 and 200A models
- Overhead and underground service entrance
- NEMA 3R indoor/outdoor enclosure
- Mechanically and electrically interlocked contactor assembly
- 200A Meter socket
- Factory wired circuit breaker service disconnect

- Generator start signal terminal strip
- 1-Pole 15A Generator accessory circuit breaker
- ATC-100 Controller

Standards and Certifications

- CSA approved.

Product Specifications

- 10,000 Symmetrical Amperes withstand rating
- 120/240 VAC 60Hz 2-pole
- -20°C to +40°C (-4°F to +104°F) Operating temperature

EGS200AMSE

Metered Service Entrance Rated Automatic Transfer Switch Utility Sense Type

Product Description

Combined in a single enclosure and factory wired is a 200A meter socket, service entrance rated circuit breaker disconnect, and an automatic transfer switch (ATS). The single enclosure assembly saves the installing contractor time and money while leaving the home owner with a cleaner and more attractive installation on the outside of their home.

Designed to work with standby generators that use a "utility sense" configuration and transfer signal from the generator

Application Description

- New or retrofit residential standby generator installations

Product Selection

Features, Functions, and Benefits

- Combined functionality in a single enclosure.
- Saves installation time and cost
- Service entrance approved for Canada
- 100 and 200 Ampere models
- Overhead and underground service entrance
- NEMA 3R indoor/outdoor enclosure
- Mechanically and electrically interlocked contactor assembly
- 200A Meter socket
- Factory wired N1 and N2 fuse block

Standards and Certifications

- CSA approved.

Product Specifications

- 10,000 Symetrical Amperes withstand rating
- 120/240 VAC 60Hz 2-pole
- -20°C to +40°C (-4°F to +104°F) Operating temperature

Eaton is dedicated to ensuring that reliable, efficient and safe power is available when it's needed most.

With unparalleled knowledge of electrical power management across industries, experts at Eaton deliver customized, integrated solutions to solve our customers' most critical challenges.

Our focus is on delivering the right solution for the application.

But, decision makers demand more than just innovative products.

They turn to Eaton for an unwavering commitment to personal support that makes customer success a top priority.

For more information, visit www.eaton.com/electrical.
